With over decade in role of Software engineer, experience in fintech, banking, and insurance specializing in system modernization, cloud migration and scalable backend platforms. Strong background in .NET, Java and CI/CD with proven ownership of production-critical services.

Experiences

Jun 2024 - Nov 2025, *Senior Software Engineer (Consultant),* **Deloitte**

Led the migration and modernization of financial stock data management system. Built and enhanced real-time market data feed system. Designed and developed new RESTful APIs to support market data access. Conduct a large-scale insurance system modernization project, migrated legacy insurance software to a modern platform. Headed the integration team to ensure seamless uplift of existing features and smooth interoperability with dependent system.

Tech: .Net, MongoDB, Redis, Kafka, Docker, Polly, Growthbook(Feature flag), React, InsureMO(Insurance)

Jun 2023 - Jun 2024, *Senior Software Developer,* **ATA IT**

Led a .Net modernization initiative, migrating multiple legacy internal system to newer versions of .Net platform, Refactored and updated legacy codebases to improve maintainability and long term supportability. Implemented CI/CD pipelines for each system, enabling automated built, test, and deployment

Tech: *.Net, Jenkins, Ansible, SQLServer*

July 2021 - Dec 2022, *Senior .Net Developer,* **LSEG (London Stock Exchange Group)**

Implemented an internal Resource Session Management(RSM) and Single Sign-On(SSO) system to improve authentication consistency and access control across internal service. Develop and maintained unittest to ensure code reliability and safer system changes. Conduct load testing to validate system behavior under high concurrency and peak usage. Assisted in infrastructure preparation with terraform to supporting environment provisioning and configuration

Tech: *.Net, Docker, Jenkins, DynamoDB, AWS, Terraform, XUnit*

Apr 2020 - July 2021, *Senior Fullstack Developer,* **Krungsri nimble**

Took ownership of the Marketplace module within a mobile banking application, ensuring reliability, performance and smooth user experience. Designed and implemented cress-application integrations between mobile banking system and other internal services. Led cloud migration process to moving service from on-premise infrastructure to AWS, improving scalability and operational flexibility.

Tech: *.Net, Redis, SQL Server, Ansible, Jenkins, Docker*

Dec 2017 - Apr 2020, *Backend Developer,* **BRINK's Global Technology**

- Built Backend service using JavaEE to support mobile applications for secure high-value logistics and cash transfer operation
- Developed SQL Server stored procedure for data processing
- Support global deployment on JBoss and production issues investigations
- Conducted load testing using JMeter

Tech: *Jave EE, SQLServer, JBoss, JMeter, RESTful*

Nov 2014 - Nov 2017, Software Specialist, **Freewill Solution**

Responsible for both backend and frontend development of the Risk Management module, a Windows Forms application designed for stock exchange brokers to monitor, manage, and track customer trading behavior. Develop backend services using Java and implement frontend functionality using C# .NET.

Tech: Java, .Net, SQLServer

Education

Bachelor of Engineering
Department of Computer Engineering
Faculty of Engineering
Prince of Songkla University | 2014

Technical Skills

Language:
C#, SQL, Java, Javascript, Go

Framework / Platform:
.Net 6/7/8, ASP NET Core, Web API, Microservice Architecture, Domain-Driven Design, Spring boot, ReactJS, ExpressJS

Data & Messaging:
SQL Server, mySQL, MongoDB, PostgreSQL, ApacheKafka, Redis, AWS DynamoDB

Cloud & Infrastructure
Amazon Web Service, Docker, Ansible, Terraform, Linux

Devops & Quality
Jenkins CI/CD, XUnit, Growthbook(Feature flag)
